Hidden Tokens in Morocco: AI, Law 09-08 and professional secrecy

Your teams use ChatGPT, Claude or Copilot on contracts, payroll, tax filings and deeds. Every file given to the AI goes to a provider based outside Morocco, with the names, CIN (national ID card) numbers, ICE (company identifier) numbers and RIBs (bank account details) it contains. Hidden Tokens codes them **on your computer**, before the AI reads the file, and puts the real values back into the result, on your side.

Updated 27 October 2026

Why the question arises

- **AI providers are abroad.** A file sent to the AI is a transfer of data outside Morocco, which Law 09-08 on the protection of individuals with regard to the processing of personal data regulates.
- **Professional secrecy has no "AI" exception.** A lawyer, notary, chartered accountant, doctor or banker who entrusts a file to a third party has entrusted it, whether that third party is a person or a piece of software.
- **Banning AI doesn't work.** Teams use it anyway, on their phones, with no trace. Authorised, controlled use is better.

What the texts say, and what Hidden Tokens does

Text	What it requires	What Hidden Tokens does
Law 09-08, arts. 23 and 24: security and confidentiality of processing	Technical measures appropriate to the risk	Coding before the AI; key on the computer, with restricted access rights; log of what went out; containment check
Law 09-08, arts. 43 and 44: transfer to a foreign state	An adequate level of protection, or authorisation from the CNDP (the Moroccan data protection authority)	The AI provider receives only codes; the key never leaves the computer
Law 09-08, art. 3: data quality and minimisation	Process only what is necessary	Only what the task needs stays readable; sensitive financial columns (payroll, turnover, assets) protected automatically
Code pénal (Criminal Code), art. 446: professional secrecy	Do not disclose what was confided to you by virtue of your status or profession	The AI works on the structure of the file, never on the client's identity
Lawyers (Law 28-08), notaries (Law 32-09), chartered accountants (Law 15-89 and the Code des devoirs (code of professional duties), Decree 2-18-454)	Confidentiality towards third parties	Dedicated industry packs; local proof of what the AI received, which the client can verify

What Hidden Tokens recognises for you

- **Moroccan identifiers**: CIN, ICE, IF (tax identifier), RC (trade register number), CNSS (social security number), patente (business tax number), Moroccan RIB (check digits verified), Moroccan phone numbers, passports.
- **Moroccan industry packs**: legal (law firm), notarial (notary's office), accounting, telecom (operator), plus banking and insurance, healthcare, HR and payroll.

- **Documents**: Word, Excel, PDF, text, scans reviewed on the computer. Deeds in French and official wording ("Royaume du Maroc", courts) stay readable so the AI can do its work.

Prices in Morocco (excl. VAT)

Solo, 1 seat	Firm, 2 to 20 seats	Organisation, 21 to 100 seats	101 to 500 seats
MAD 1,200 / year	**MAD 900 / seat / year**	**MAD 580 / seat / year** minimum MAD 15,000	**MAD 430 / seat / year**

For the first ten customers in Morocco on the Firm or Organisation plan: one day of on-site rollout free (travel costs extra).

14-day trial, no account, no card. Guided pilot free until January 2027. Invoiced by Tardigrade SARL, Casablanca.

What Hidden Tokens doesn't do

- It doesn't make you "compliant": it supports your compliance, and documents it. Any formalities with the CNDP, where they apply, remain yours.
- It protects what goes through it. Text pasted by hand into the chat isn't covered.
- Pseudonymised data remains personal data for whoever holds the key: that's you, and that's by design.
